SUMMARY

Full Stack Developer with expertise in Python, Django, HTML, CSS, JavaScript, and React, focused on building responsive web applications and integrating databases. Passionate about creating clean, scalable code and continuously learning new technologies

PROJECTS

Core Web Project - Universe Details and Book Selling Platform

Developed a dynamic web application offering detailed information about the universe and selling astronomy books, using HTML, CSS, and Bootstrap for a responsive, engaging interface. The site features interactive content on galaxies, stars, planets, and space exploration.

MySQL Music Database - Herzsschlag

Created Herzsschlag, a comprehensive music database using MySQL to manage artist, song, album, and genre information, with optimized performance for faster data retrieval through indexing and query optimization.

Python Bank System - Bank

Developed a Python-based banking system that allows users to create accounts, deposit and withdraw funds, and check balances. The project includes features for secure transactions and data storage, providing a simple, interactive user experience.

Django Music System – Ganymede

Built a music streaming application similar to Spotify using Django, with features for user authentication, account management, playlists, and artist following. Utilized Django ORM for efficient handling of database models for users, songs, and playlists.
